The application is about the weakest application I have ever used. The GUI is clunky and you will spend your time trying to find the necessary buttons to find and save a price history. The application couldn't even save the pricing it downloaded. It would crash whenever it tried to write it. I also did not like that it required adding a folder path as this is a GUI application and shouldn't be requiring user interaction. Another small problem is that it will not recognize the stock symbol until after you have deleted all of the stocks. For someone who wants a simple solution to the problem you have at hand, it might work for you. For the price, it is not worth it. Downloading does not work as recommended. There is absolutely no information regarding the location of the download. The concept is simple, yet it is not at all Old style templates still exist, but we're notified about those errors. Graphical tool is not very well thought out. Uninstaller is not intuitive. I have a hunch that the application is not being used as planned. Very simple and easy to use application. varCalculation is a lightweight, yet handy application that can download stock historical data and calculate the value at risk. varCalculation only runs in the command console, enabling you to specify the ticker symbol and the destination folder for downloading the historical prices.
